

OSHA General Industry Certificate Course Descriptions

OSHA Hazard Communication Standards

The Globally Harmonized System of Classification and Labeling of Chemicals (GHS) was created by the United Nations and serves as the international standard for Hazard Communication. Recent changes to the OSHA Hazard Communication Standards have aligned the United States with the GHS, and training is required to familiarize employers and employees on these changes by 12/1/13. With our certificate program, you will learn important information about these changes to hazard classification, labels, safety data sheets, as well as employee training requirements.

Introduction to OSHA for General Industry

OSHA was established to ensure the safety and health of America's workers. In this 1-hour Introduction to OSHA certificate course, you will learn about the importance of OSHA to workers, worker rights under OSHA, the importance of OSHA standards, and the availability of worker safety and health resources. Once this course is completed, you will be able to explain the importance of OSHA in providing a safe and healthful workplace to workers covered by OSHA.

Recordkeeping for General Industry

Recordkeeping is an important tool in tracking and preventing hazards in the workplace. In this OSHA Recordkeeping Certificate Course, you will learn about OSHA recordkeeping requirements, including procedures for recording events, general recordkeeping criteria, and common recordkeeping forms used in the workplace.

Ergonomics for General Industry

Ergonomics is the science of a full range of tasks including, but not limited to, lifting, holding, pushing, walking and reaching. Many ergonomic problems result from technological changes such as increased assembly line speeds, adding specialized tasks and increased repetition. In this 1-hour OSHA Ergonomics Certificate course, you will learn the importance of ergonomics in the workplace and how to avoid ergonomic injuries by following OSHA guidelines.

OSHA Lockout and Tagout for General Industry

OSHA created the lockout/tagout standard to cover the servicing and maintenance of machines and equipment in which the "unexpected" energization or start up of the machines or equipment or release of stored energy could cause injury to employees. This OSHA Lockout and Tagout Certificate 1-Hour course, addresses practices and procedures that are necessary to disable machinery or equipment and to prevent the release of potentially hazardous energy while maintenance and servicing activities are being performed.

OSHA Machine Guarding for General Industry

Workers using machinery may be exposed to several hazards that can lead to injury or even death. In the process of removing or avoiding hazards, workers must learn to recognize the hazards associated with the different types of equipment and safety precautions necessary to prevent those hazards. In this 1-Hour OSHA Machine Guarding Certificate course, you will learn the purpose and importance of machine guarding in preventing injuries.

OSHA Personal Protective Equipment for General Industry

Personal Protective Equipment (PPE) is required by OSHA to reduce employee exposure to hazards. Employers are required to determine if PPE should be used to protect their workers. Keep yourself and others safe by taking the Personal Protective Equipment 1-Hour Course.

OSHA Safety and Health Programs for General Industry

This OSHA Safety and Health Programs for General Industry Course is intended to cover general guidelines for establishing safety and health programs in the workplace. This course covers topics including: management leadership and employee involvement, worksite analysis, and safety and health training. In this course, you will learn the major elements necessary for an effective safety and health program, study job hazard analysis, hazard identification, and hazard control, and review safety and health guidelines and inspection procedures.

OSHA Confined Space Entry for General Industry

This OSHA Confined Space Entry for General Industry 1-Hour Course will cover permit-required confined spaces and the precautions necessary for entry. Topics covered in this course include: confined spaces, permit-required confined spaces, and training requirements.

OSHA Fire Detection and Protection for General Industry

In this 1-Hour OSHA Fire Detection and Protection for General Industry course, you will learn about OSHA's requirements for fire detection and protection in the event of a workplace fire. This lesson will cover standpipe, hose, and automatic sprinkler systems, fire detection systems, and fixed extinguishing and employee alarm systems.

OSHA Walking and Working Surfaces for General Industry

The majority of general industry accidents are caused by slips, trips and falls. In addition, 15 percent of those accidents result in fatalities. This 1-Hour OSHA Walking and Working Surfaces Certificate course teaches you the importance of identifying and protecting against hazards related to walking and working surfaces. This course and the OSHA standards contained within, apply to all permanent places of employment, except where only Domestic, Mining, and Agricultural work is performed.

OSHA Bloodborne Pathogens

We offer an OSHA 1-hour Bloodborne Pathogens Exposure Control Certificate course that provides specialized and in-depth training for your industry. Learn about Bloodborne Pathogens and how to avoid exposure, learn how to create and implement an exposure control plan and how to train and teach your employees. You will know OSHA's standards and regulations and be able to apply them to best fit your needs.
